

Wattmon Hardware

There are current three variations of the Wattmon device: Wattmon, WattmonPRO, and WattmonMINI.

The Wattmon original hardware is no longer in circulation but we have kept the reference here for historical record.

The [WattmonPRO](#) is the most flexible device with multiple interfaces and built in IO ports.

The [WattmonMINI](#) is a reduced version of the WattmonPRO with a single Modbus RTU port.

The WattmonMEGA is an upcoming hardware that will be 4x faster and have 4x more memory for larger applications.
