

ftp_command

WM-MINI2, WM-MEGA FW >= 2.1137 WM-M2 FW >= 3.1137

Send an FTP command and get the response

Description

`string ftp_command (string $command)`

Send an FTP command to the server and get the response back

Parameters

\$command: **String** containing the command without line break

Return Values

string: Full response line from the server

Example

```
<?
$res = ftp_open("ftp.myserver.com",21,"myuser","mypassword");
if ($res) {

    // get the current directory on the server

    $res=ftp_command("pwd");

    print($res."\r\n"); // will print out something like: 257 "/" is
your current location

    ftp_close();
}
?>
```
