

# netstat

WMPRO, WMMINI FW >= 1.0 WMMEGA FW >= 2.0

Get Ethernet information

## Description

`array netstat ( )`

This function returns an **array** containing information about the state of the network interface

## Parameters

None

## Return Values

**Array** containing the following keys and values:

KEY	TYPE	VALUE
max_http_connections	<b>int</b>	The number of HTTP connections allowed
max_connections	<b>int</b>	The total number of TCP connections allowed
internet_connected	<b>int</b>	Returns 1 if Internet is connected (only available in fw x.1203+)
interface	<b>int</b>	Returns 0 for Ethernet, 1 for Cellular, 2 for WiFi (only available in fw x.1203+)
connX_socket <sup>1)</sup>	<b>int</b>	Socket number for connection X
connX_stage	<b>int</b>	Socket status for connection X
connX_info	<b>string</b>	Information about the connection if any. For connection info string details, see the sample below.
connX_remote	<b>string</b>	Remote host IP address

## Sample Connection Value

```
Open:0|Aborted:0|Process:0|Path:\app\|Fn:devcalib_ajax.cgi|Type:3|Time:0|Fstage:7|Context:0|Socket:4
```

## Example

```
<?
$arr=netstat();
print("Total connections available: ".$arr['max_connections']);
```

?>
