smtp_mail

WattmonOS 3.12+

Send an email using a raw socket over SMTP

Library

```
/lib/uphp/stmp.inc
```

Description

smtp_mail (string $to , string $from , string $subject , string $message , string $user , string $password , string $host , int $port)

This function will send an email using the SMTP Server settings that you pass to the function. You can use port 465 / 587 for SSL/TLS.

Parameters

$to: Recipient email id

$from: Sender email id

$subject: Email subject

$message: Email message contents

$user: SMTP user id

$password: SMTP password

$host: SMTP Server hostname

$port: SMTP Server port

Return Values

int - 250 if successful or else the SMTP error code
