

exec

WMPRO, WMMINI FW >= 1.0 WMMEGA FW >= 2.0

Run a script with an optional delay

Description

`exec (string $script [, int $delay])`

Parameters

\$script: Path and filename of script to execute

\$delay: Optional delay in milliseconds before script is started

Return Values

None

Example

```
<?
  exec("/scripts/ip.cgi",1000); // run the external script in 1 second from
now
  // ...
  // (if there are any further commands here they will be executed
immediately without delay)
  // ...
?>
```
