implode

WMPRO, WMMINI FW >= 1.0 WMMEGA FW >= 2.0

Turn an array into a string

Description

string implode (array $array, string $delimiter)
Turn an array into a string with the delimiter separating each element

Parameters

$array: Array to be turned into a string

$delimiter: Character to use for separating each array element put into the string

Return Value

String containing concatenated elements

Example

```
<?
  $mylist=array("one","two","three","four");
  $st=implode($mylist,"|");
  print($st);
?>
```

The above example will output:

```
one|two|three|four
```

See Also

explode() - Turn a string into an array

array() - Create an array, with optional values

uPHP Variable Types and Limits

Additional Information

The mainline PHP function `implode()` can accept its parameters in either order, but uPHP requires that the array comes first followed by the delimiter.

Wattmon uPHP's parameter order is easier to remember and more consistent: The delimiter parameter comes last in both explode() and implode().
