ini_get

WMPRO, WMMINI FW >= 1.0 WMMEGA FW >= 2.0

Get a value from an INI file

Description

mixed ini_get (string $filename, string $section, string $key, mixed $default)

This function reads a configuration **key** value from an INI file. If the **section** and **key** are not found, the **default** value is returned.

Parameters

$filename: Full path and name of the INI file

$section: Name of the section inside the INI file

$key: Name of the key inside the **section**

$default: Value to be returned if the **section** and **key** are not found

Return Values

Mixed: Value associated with the **key**, or the **default** value if the **section** and **key** are not found

The value will be of type **string**, **integer** or **float** depending on the data type of the **key** value (or the data type of the **default** value if the **section** or **key** is not found).

Example

Get the network mask from the Wattmon network configuration file

```
<?
  $val=ini_get("/config/network.ini","network","netmask","255.255.255.0");
  print($val);
?>
```
