ini_put_array

WMPRO, WMMINI FW >= 1.0 WMMEGA FW >= 2.0

Write a group of parameters to an INI file from an **array**

Description

ini_put_array (string $filename, array $data [, string $section])

This function writes multiple configuration key/value pairs to an INI file. Values can be written to a single section if the optional **section** is specified (provide a single-dimensional **array**). Values can be written to one or more sections if **section** is not specified (provide a two-dimensional **array**).

If the INI file already exists it will be entirely overwritten. Use ini_set to partially update an existing INI file.

Parameters

$filename: Full path and name of the INI file

$data: **Array** of key/value elements to write

- If **section** is specified, a single-dimensional **array** should be provided (to write values only to one section).
- If **section** is not specified, a two-dimensional **array** can be provided, where the first dimension contains the sections and the second the key/value pairs (to write values in one or more sections).

$section: Optional, name of the section inside the INI file (provide the **data** as a single-dimensional **array**)

Return Values

None

Examples

Single-dimensional array, section specified

```
<?
  $arr=array();
  $arr['name']="John";
  $arr['age']=33;
```

```
  ini_put_array("/ini_put_array_example.ini",$arr,"settings");
?>
```

The INI file will contain:

```
[settings]
name=John
age=33
```

Two-dimensional array, section NOT specified

```
<?
  $arr=array();
  $arr['data']=array();
  $arr['data']['name']="Jeff";
  $arr['data']['age']=39;
  $arr['address']=array();
  $arr['address']['city']="Rayville"
  $arr['address']['country']="USA"
  ini_put_array("/ini_put_array_example.ini",$arr);
?>
```

The INI file will contain:

```
[data]
name=Jeff
age=39
[address]
city=Rayville
country=USA
```
