

json_encode

WMPRO, WMMINI FW >= 1.0 WMMEGA FW >= 2.0

JSON encode an array into a string, with optional method

Description

`string json_encode (array $array [, int $method])`

Return a string containing the JSON¹⁾ encoded representation of an array

Parameters

array: An array to parse

method: Optional:

- **0** - Output JSON code to represent an object (default for \$method not specified)
- **1** - Output JSON code to represent an array (without keys)

Return Value

JSON encoded string

Example

```
<pre><?
 $arr=array();
 $arr['a']=1;
 $arr['b']=2;
 $arr['c']=3;
 print(json_encode($arr)."\r\n"); // encode as an object (default method)
 print(json_encode($arr,0)."\r\n"); // encode as an object
 print(json_encode($arr,1)."\r\n"); // encode as an array
?></pre>
```

The above example will output:

```
">$arr":{"a":1,"b":2,"c":3}
$arr:[{"a":1,"b":2,"c":3}
$arr:[1,2,3]
```
