

mkdir

WMPRO, WMMINI FW >= 1.0 WMMEGA FW >= 2.0

Make a directory

Description

```
int mkdir ( string $pathname )
```

This function attempts to create a new directory as specified by the **pathname**

Parameter

\$pathname: The directory path. Using a / at the beginning will make it relative to the root, otherwise it will be relative to the current working directory, which is either the folder that the script was started in or as was set by [chdir\(\)](#).

Return Values

Integer: 0=success, otherwise error code

Example

```
<?
  if (mkdir('/path/to/dir')) die('Failed to create folders...');
?>
```

See Also

[chdir\(\)](#) - Change the current directory

[getcwd\(\)](#) - Get the current directory

[rmdir\(\)](#) - Remove a directory, with optional deletion of contents
