

nvram_set

WMPRO, WMMINI FW >= 1.0 WMMEGA FW >= 2.0

Set a **key** and **value** in NVRAM

Description

```
int nvram_set ( string $key, string $value )
```

Set a **value** in NVRAM for a particular **key**. If the **key** already exists it will be overwritten.

Parameters

\$key: **String** variable name to set associated value for

\$value: **String** value to set. If you wish to set a numeric value, first convert it to a string using `strval()` or `number_format()`.

Return Values

Integer: 1 on success, or 0 on failure

Example

```
<?
  $res=nvram_set("myvariable","Test");
  if (!$res) print("Error saving NVRAM key/value");
?>
```
