

ord

WMPRO, WMMINI FW >= 1.0 WMMEGA FW >= 2.0

Return the ASCII code for a **character**

Description

```
int ord ( string $character )
```

Parameter

\$character: A **string** containing 1 character

Return Values

Integer: ASCII code number (0-255) of the passed **character**. If the **string** length is greater than 1 it will return 0.

Example

```
<?
$a=chr(65);
$o=ord($a);
print("Character ".$a." has ASCII code ".$o);
?>
```

See Also

chr() - Return the character for an ASCII code

charat() - Return the ASCII code for a character in a **string** at an index
