

setethpower

WMPRO, WMMINI FW >= 1.0 WMMEGA FW >= 2.0

Enable or disable the ethernet controller

Description

setethpower (`int $state`)

This function will turn on or off the ethernet controller MAC layer.

Turning it off will save power but render your device unreachable (you could always switch it back on periodically). When off, the power consumption is reduced from 2W down to 1W.

Parameter

\$state:

- **1** - Enable the ethernet controller
- **0** - Disable the ethernet controller

Return Values

None

Example

```
<?  
  setethpower(0);  
?>
```
